

- **The Next Generation of Thermal Reinforcements**
- Developed as a collaborative effort with Bayer MaterialScience LLC and is part of an exclusive agreement between Bayer and Deceuninck
- Aluminum reinforcement replacement
 - Designed so that existing code testing can be waived
 - Better thermal properties—up to 700 X better
- Extremely durable with high impact resistance—Impacts and forces do not cause a permanent set as in other metal reinforcements
- Virtually impermeable to cold or heat
- Highly resistant to condensation, which helps prevent staining that can occur with metal reinforcements
- Resins are 20 % bio-based with no styrene or peroxides
